INSTRUCTION MANUAL

(M213B01-03-19A)

CE

SAFETY PRECAUTIONS

Follow the warnings described in this manual with the symbols shown below.

DANGER

Warns of a risk, which could result in personal injury or material damage.

ATTENTION

Indicates that special attention should be paid to a specific point.

If you must handle the unit for its installation, start-up or maintenance, the following should be taken into consideration:

Incorrect handling or installation of the unit may result in injury to personnel as well as damage to the unit. In particular, handling with voltages applied may result in electric shock, which may cause death or serious injury to personnel. Defective installation or maintenance may also lead to the risk of fire.

Read the manual carefully prior to connecting the unit. Follow all installation and maintenance instructions throughout the unit's working life. Pay special attention to the installation standards of the National Electrical Code.

Refer to the instruction manual before using the unit

In this manual, if the instructions marked with this symbol are not respected or carried out correctly, it can result in injury or damage to the unit and /or installations.

CIRCUTOR, SA reserves the right to modify features or the product manual without prior notification.

DISCLAIMER

CIRCUTOR, SA reserves the right to make modifications to the device or the unit specifications set out in this instruction manual without prior notice.

CIRCUTOR, SA on its web site, supplies its customers with the latest versions of the device specifications and the most updated manuals.

SYMBOLS

Table 2: Symbols.

Symbol	Description
	In compliance with the relevant European directive.
	Device covered by European directive 2012/19/EC. At the end of its useful life, do not leave the unit in a household waste container. Follow local regulations on electronic equipment recycling.
	DC current
	AC current

Note : Devices images are for illustrative purposes only and may differ from the actual device.

1.- VERIFICATION UPON RECEPTION

Check the following points when you receive the device:

- a) The device meets the specifications described in your order.
- b) The device has not suffered any damage during transport.
- c) Perform an external visual inspection of the device prior to switching it on.
- d) Check that it has been delivered with the following:
 - An installation guide,

If any problem is noticed upon reception, immediately contact the transport company and/or **CIRCUTOR's** after-sales service.

2.- PRODUCT DESCRIPTION

The **DCB-48 Aac** is a device designed to measure and display the current and frequency AC single-phase.

The device has 2 programmable current scales: 1 A and 5 A.

The device features:

- **4 keys** that allow you to browse between the various screens and program the device.
- **LED display**, displays all parameters,

Table 3:DCB-48 Aac list of models.

Model	Power Supply		
	80 ... 270 V ~	80 ... 270 V ==	18 ... 36 V ==
M22150	✓	✓	-
M221500030000	-	-	✓

3.- DEVICE INSTALLATION

3.1.- PRIOR RECOMMENDATIONS

In order to use the device safely, it is critical that individuals who handle it follow the safety measures set out in the standards of the country where it is being used, use the necessary personal protective equipment, and pay attention to the various warnings indicated in this instruction manual.

The **DCB-48 Aac** device must be installed by authorised and qualified staff.

The power supply plug must be disconnected and measuring systems switched off before handling, altering the connections or replacing the device. It is dangerous to handle the device while it is powered.

Also, it is critical to keep the cables in perfect condition in order to avoid accidents, personal injury and damage to installations.

The device's functionality is limited to the category of measuring voltage or specific current values.

The manufacturer of the device is not responsible for any damage resulting from failure by the user or installer to heed the warnings and/or recommendations set out in this manual, nor for damage resulting from the use of non-original products or accessories or those made by other manufacturers.

If an anomaly or malfunction is detected in the device, do not use it to take any measurements.

Disconnect the device from the power supply (device and measuring system power supply) before maintaining, repairing or handling the device's connections. Please contact the after-sales service if you suspect that there is an operational fault in the device.

3.2.- INSTALLATION

Terminals, opening covers or removing elements can expose parts that are hazardous to the touch while the device is powered. Do not use the device until it is fully installed.

The device should be installed inside an electric panel or enclosure, and panel-mounted.

To install it, take the following steps:

1.- Make a cut in the panel, according to the dimensions in **Figure 1**.

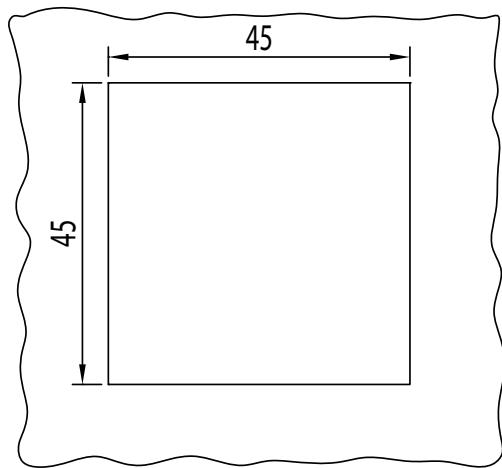

Figure 1: Cut in the panel.

2.- Remove the device's mounting frame (**Figure 2**).

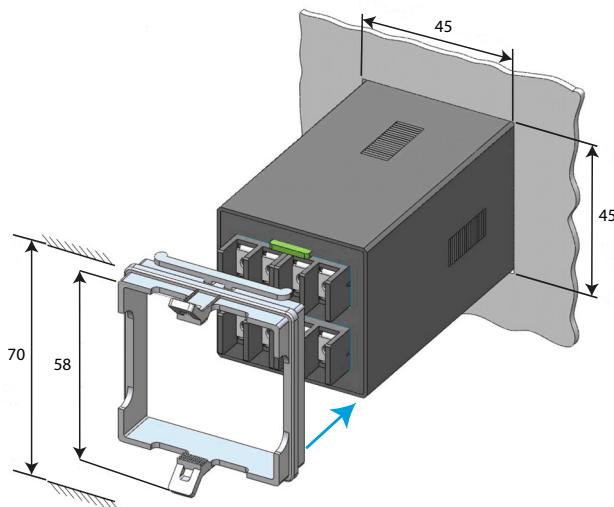

Figure 2: Installation.

3.- Insert the device into the cut in the panel.

4.- Fit the mounting frame until the device is fixed to the panel.

The device should be connected to a power circuit protected by a fuse with a maximum nominal current of **0.25 A**.

3.3.- DEVICE TERMINALS

Table 4:List of terminals of the DCB-48 Aac.

Device terminals	
1 : L, Auxiliary power supply.	4: Current measurement input
2: N, Auxiliary power supply.	5: Current measurement input

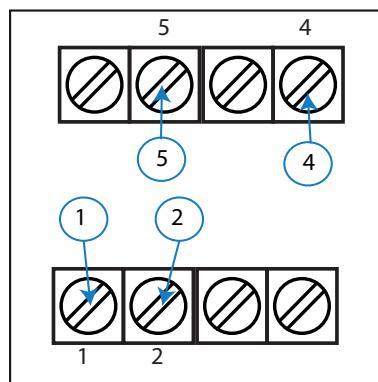

Figure 3:Terminals of the DCB-48 Aac.

Note: Before disconnecting the current measurement connection cables, make sure that you disconnect the transformer's primary cable and bridge the secondary.

3.4.- CONNECTION DIAGRAM

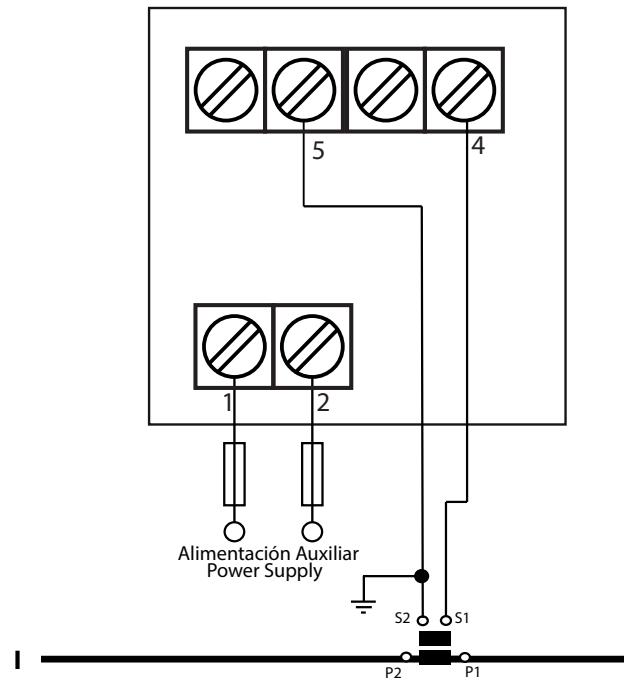

Figure 4: Current measurement DCB-48 Aac.

If the current being measured is higher than the nominal input current, **5A**, a current transformer should be connected to the device.

If more than one device is connected to the current transformer, it is necessary to connect them in series.

4.- OPERATION

4.1.- DISPLAY

The device features a 4-digit LED display, which is used to display the measured parameters and to configure these parameters

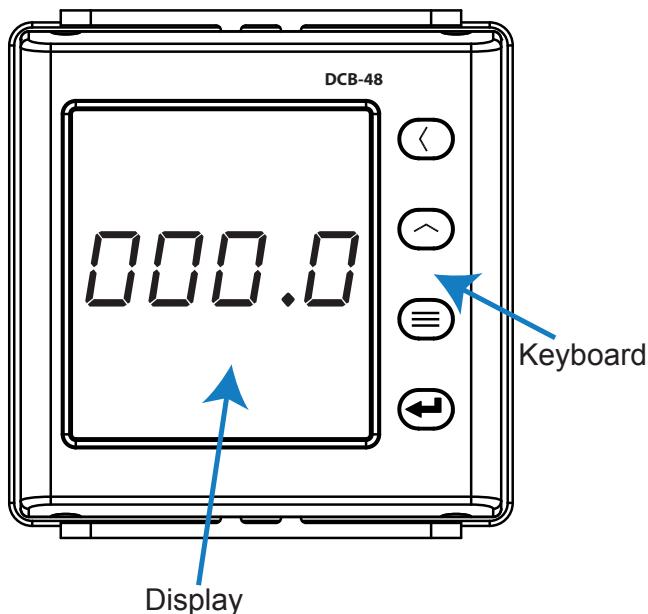

Figure 5: Display DCB-48.

4.2.- KEYBOARD FUNCTIONS

The **DCB-48 Aac** features 4 keys to display and configure the device, **Figure 5**.

Table 5: Keyboard functions.

Key	Keystroke
	Previous screen In the configuration menu: Scroll through the digits
	Next screen In the configuration menu: Increase the value of the digit
	Long keystroke (> 3s): Enter in configuration menu
	In the configuration menu: Jump to the next level / Confirm an operation

4.3.- DISPLAY

The **DCB-48 Aac** features 2 display screens, **Table 6**.

Use the and keys to browse the screens.

Table 6: Display menu.

Display menu	
Current	

If the current value measured by the device is higher than a % of the nominal value, the device can make the digits on the display start flashing, in the form of a light alarm. See “**5.2.3.- LIGHT ALARM**”

5.- CONFIGURATION

Press and hold the  key for more than 3 seconds to enter the configuration menu of the device.

The configuration of the device is organized in different menus, **Figure 6**.

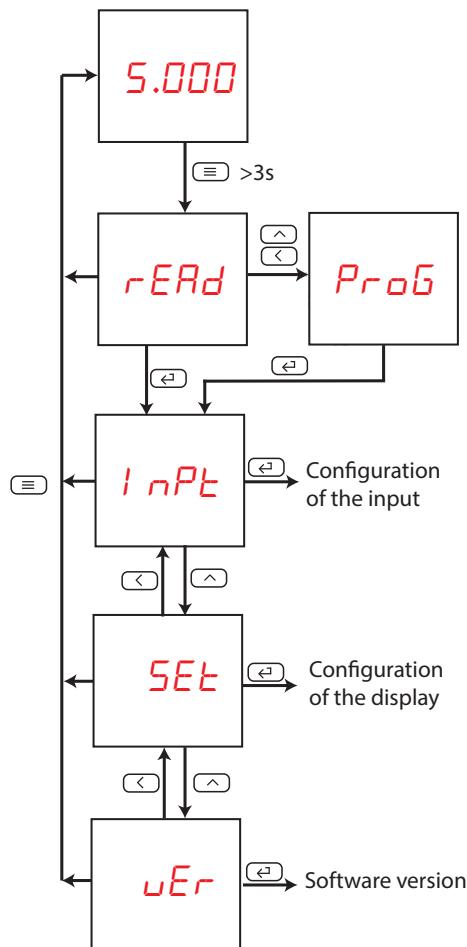

Figure 6: Configuration menu of the DCB-48 Aac.

From any screen of the configuration menus, if no key is pressed for 4 minutes, the device leaves the configuration menu and returns to the display screen.

On the *rERd* screen, press the  key to access the configuration menu in the **display mode**, i.e., the configuration parameters cannot be modified.

On the *rERd* screen, press the  or  keys to access the configuration menu in the **programming mode**, i.e., the configuration parameters can be modified.

Note: In “ANNEX A.- CONFIGURATION MENU” you can see the complete configuration menu.

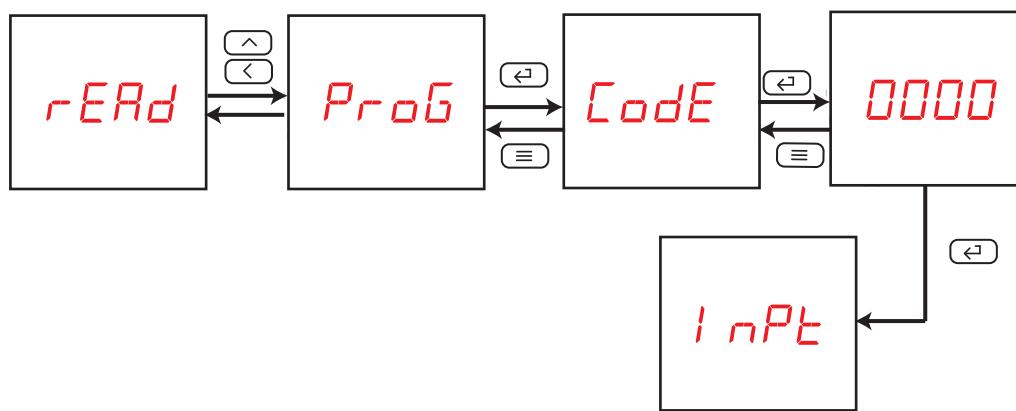

Figure 7: Access the configuration menu in the programming mode.

Before accessing the configuration menu, it is necessary to enter the access password.

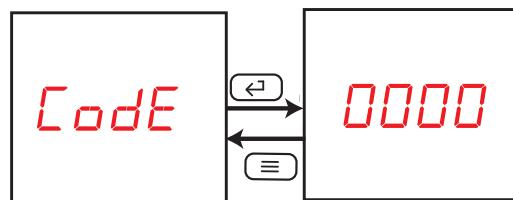

Figure 8:Access password.

Use the key to modify the value of the flashing digit

When the desired value is shown on the screen, press the key to skip the digit.

Default password: 0001

Note : The password can be modified, see “5.2.1.- PASSWORD OF ACCESS”.

To validate the data, press the key.

If the password entered is incorrect, the *Err* message will appear for a few seconds and the device will return to the password configuration screen, **Figure 8**.

5.1.- CONFIGURATION OF THE INPUT

Figure 9, shows the main screen of the input configuration menu, from which the primary current and secondary current are configured.

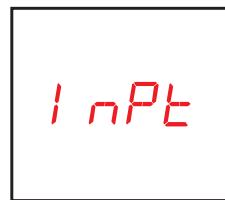

Figure 9: Input configuration menu, main screen.

Press the key to open the configuration menu.

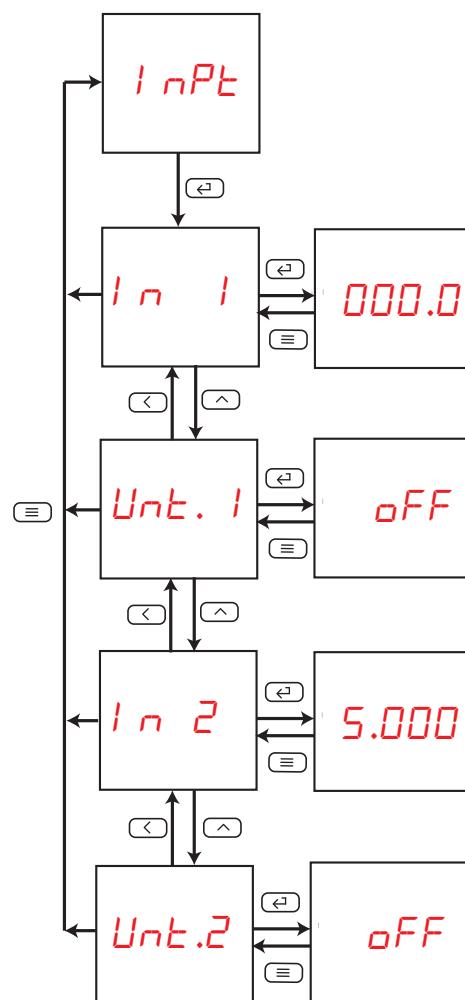

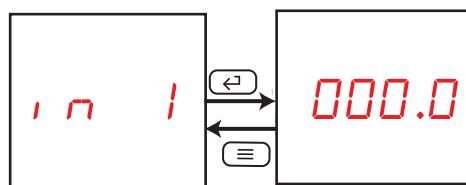

Figure 10:Input configuration menu.

5.1.1.- PRIMARY CURRENT

This screen is used to configure the value of the primary current.

Use the key to modify the value of the flashing digit

When the desired value is shown on the screen, press the key to skip the digit.

When you reach the last digit and press the key, you select the position of the decimal point. Use the to modify the decimal point.

Minimum configuration value: 1.000.

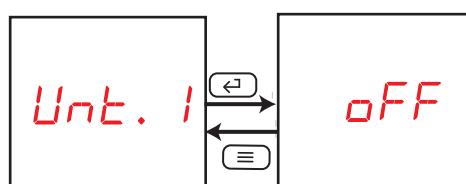

Maximum configuration value: 9999.

To validate the data, press the key.

Use the and keys to browse the configuration screens of the menu.

5.1.2.- UNITS OF THE PRIMARY CURRENT

This screen is used to configure the units of the primary current.

Use the key to browse the different options:

OFF, the unit of the primary current is **A**.

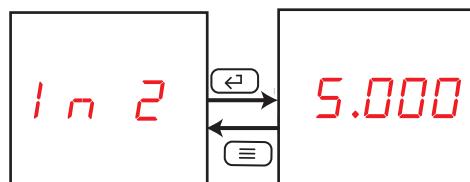

A, the unit of the primary current is **kA**.

To validate the data, press the key.

Use the and keys to browse the configuration screens of the menu.

5.1.3.- SECONDARY CURRENT

This screen is used to configure the value of the secondary current.

Use the and keys at the same time to configure the value.

Use the key to browse the different options:

5.000, for the current scale of 0 ... 5 A.

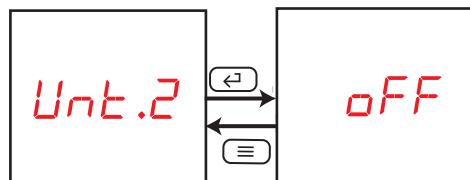

1.000, for the current scale of 0 ... 1 A.

To validate the data, press the key.

Use the and keys to browse the configuration screens of the menu.

5.1.4.- UNITS OF THE SECONDARY CURRENT

Note: This parameter cannot be modified.

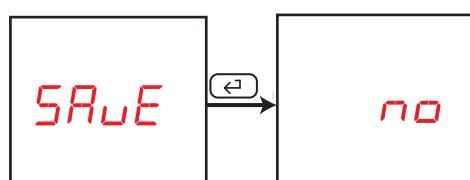

Use the and keys to browse the configuration screens of the menu.

5.1.5.- SAVE CONFIGURATION

To save the configuration of the device, press the key, until the main screen of the input configuration menu is opened, **Figure 9**.

Press the key again to show the validation screen.

Use the key to browse the different options:

no, exit the configuration without saving the changed values.

YES, save the changed configuration values.

Press the key to validate the data and exit the configuration menu.

5.2.- CONFIGURATION OF THE DISPLAY

Figure 11, shows the main screen of the configuration menu of the display.

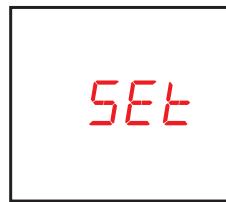

Figure 11: Configuration menu of the display, main screen.

Press the key to open the configuration menu.

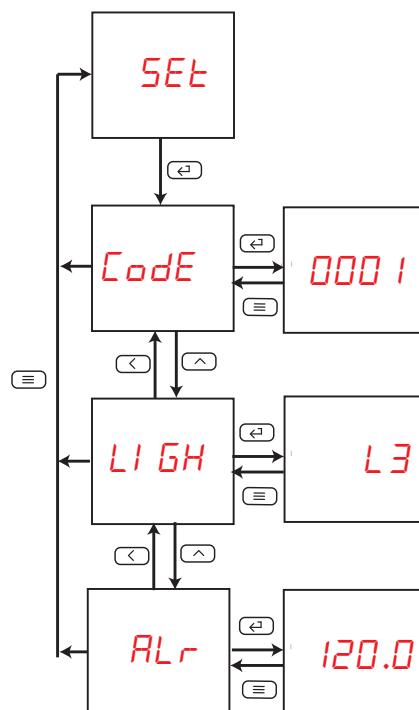

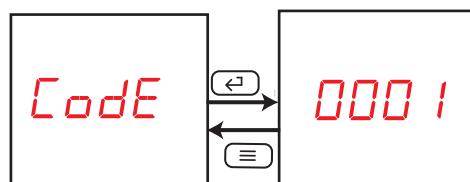

Figure 12: Configuration menu of the display.

5.2.1.- PASSWORD OFF ACCESS

This screen is used to configure the value of the password used to access the configuration menu in the **programming mode**.

Use the , key to modify the value of the flashing digit

When the desired value is shown on the screen, press the key to skip the digit.

Minimum configuration value: 0

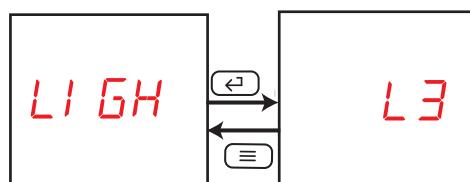

Maximum configuration value: 9999

To validate the data, press the  key.

Use the  and  keys to browse the configuration screens of the menu.

5.2.2.- BRIGHTNESS OF THE DISPLAY

The brightness of the display is configured on this screen.

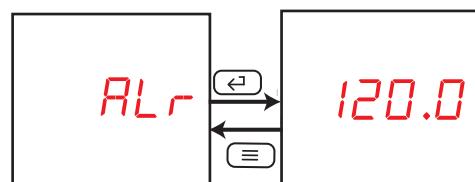

Use the  key to browse the different options: the display has 5 brightness levels, from *L 1* to *L 5*.

To validate the data, press the  key.

Use the  and  keys to browse the configuration screens of the menu.

5.2.3.- LIGHT ALARM

If the current value measured by the device is higher than a % of the nominal value, the device can make the digits on the display start flashing, in the form of a light alarm.

Use the  key to modify the value of the flashing digit.

When the desired value is shown on the screen, press the  key to skip the digit.

Minimum configuration value: 30.3%

Maximum configuration value: 120.0%

Note: If the a value of 0 is programmed, the light alarm will be deactivated.

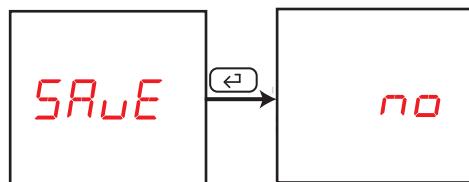

To validate the data, press the  key.

Use the  and  keys to browse the configuration screens of the menu.

5.2.4.- SAVE CONFIGURATION

To save the configuration of the device, press the  key until the main screen of the configuration menu of the display is opened, **Figure 11**.

Press the  key again to show the validation screen.

Use the  key to browse the different options:

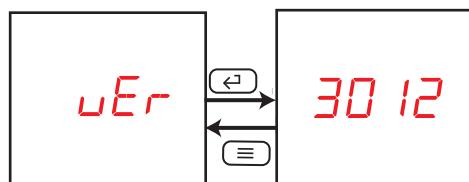

no, exit the configuration without saving the changed values.

YES, save the changed configuration values.

Press the  key to validate the data and exit the configuration menu.

5.3.- SOFTWARE VERSION

The software version of the device is shown in the **display mode**.

6.- TECHNICAL FEATURES

AC Power supply ⁽¹⁾	
Rated voltage	80 ... 270 V ~
Frequency	50 / 60 Hz
Consumption	0.5 ... 3 VA
Installation category	CAT III 300 V

DC Power supply ⁽¹⁾		
Rated voltage	80 ... 270 V ==	18 ... 36 V ==
Consumption	0.3 ... 0.4 W

7.- MAINTENANCE AND TECHNICAL SERVICE

In the case of any query in relation to unit operation or malfunction, please contact the **CIRCUTOR, SA** Technical Support Service.

Technical Assistance Service

Vial Sant Jordi, s/n, 08232 - Viladecavalls (Barcelona)
Tel: 902 449 459 (España) / +34 937 452 919 (outside of Spain)
email: sat@circutor.es

8.- GUARANTEE

CIRCUTOR guarantees its products against any manufacturing defect for two years after the delivery of the units.

CIRCUTOR will repair or replace any defective factory product returned during the guarantee period.

- No returns will be accepted and no unit will be repaired or replaced if it is not accompanied by a report indicating the defect detected or the reason for the return.
- The guarantee will be void if the units has been improperly used or the storage, installation and maintenance instructions listed in this manual have not been followed. “Improper usage” is defined as any operating or storage condition contrary to the national electrical code or that surpasses the limits indicated in the technical and environmental features of this manual.
- **CIRCUTOR** accepts no liability due to the possible damage to the unit or other parts of the installation, nor will it cover any possible sanctions derived from a possible failure, improper installation or “improper usage” of the unit. Consequently, this guarantee does not apply to failures occurring in the following cases:
 - Overvoltages and/or electrical disturbances in the supply;
 - Water, if the product does not have the appropriate IP classification;
 - Poor ventilation and/or excessive temperatures;
 - Improper installation and/or lack of maintenance;
 - Buyer repairs or modifications without the manufacturer’s authorisation.
