## SAFETY PRECAUTIONS

Follow the warnings described in this manual with the symbols shown below.

### DANGER

Warns of a risk, which could result in personal injury or material damage.

### ATTENTION

Indicates that special attention should be paid to a specific point.

**If you must handle the unit for its installation, start-up or maintenance, the following should be taken into consideration:**

Incorrect handling or installation of the unit may result in injury to personnel as well as damage to the unit. In particular, handling with voltages applied may result in electric shock, which may cause death or serious injury to personnel. Defective installation or maintenance may also lead to the risk of fire.

Read the manual carefully prior to connecting the unit. Follow all installation and maintenance instructions throughout the unit's working life. Pay special attention to the installation standards of the National Electrical Code.

### Refer to the instruction manual before using the unit

In this manual, if the instructions marked with this symbol are not respected or carried out correctly, it can result in injury or damage to the unit and / or installations.

CIRCUTOR, SA reserves the right to modify features or the product manual without prior notification.

## DISCLAIMER

CIRCUTOR, SA reserves the right to make modifications to the device or the unit specifications set out in this instruction manual without prior notice.

CIRCUTOR, SA on its web site, supplies its customers with the latest versions of the device specifications and the most updated manuals.

[www.circutor.com](http://www.circutor.com)

CIRCUTOR, recommends using the original cables and accessories that are supplied with the device.

## 1.- VERIFICATION UPON RECEPTION

Check the following points when you receive the device:

- a) The device meets the specifications described in your order.
- b) The device has not suffered any damage during transport.
- c) Perform an external visual inspection of the device prior to switching it on.
- d) Check that it has been delivered with the following:
  - An installation guide,

If any problem is noticed upon reception, immediately contact the transport company and/or CIRCUTOR's after-sales service.

## 2.- PRODUCT DESCRIPTION

The **DCB-72 Vac** is a device designed to measure and display the voltage and the frequency AC single-phase. The device has 6 programmable voltage scales: 63.5V, 100V, 110V, 230 V, 380 V and 480 V.

The device features:

- **4 keys** that allow you to browse between the various screens and program the device.
- **LED display**, displays all parameters,
- 2 fully programmable **relay outputs** (depending on the model).

### 3.- DEVICE INSTALLATION

#### 3.1.- PRIOR RECOMMENDATIONS

In order to use the device safely, it is critical that individuals who handle it follow the safety measures set out in the standards of the country where it is being used, use the necessary personal protective equipment, and pay attention to the various warnings indicated in this instruction manual.

The **DCB-72 Vac** device must be installed by authorised and qualified staff.

The power supply plug must be disconnected and measuring systems switched off before handling, altering the connections or replacing the device. It is dangerous to handle the device while it is powered.

Also, it is critical to keep the cables in perfect condition in order to avoid accidents, personal injury and damage to installations.

The device's functionality is limited to the category of measuring voltage or specific current values.

The manufacturer of the device is not responsible for any damage resulting from failure by the user or installer to heed the warnings and/or recommendations set out in this manual, nor for damage resulting from the use of non-original products or accessories or those made by other manufacturers.

If an anomaly or malfunction is detected in the device, do not use it to take any measurements.

Disconnect the device from the power supply (device and measuring system power supply) before maintaining, repairing or handling the device's connections. Please contact the after-sales service if you suspect that there is an operational fault in the device.

### 3.2.- INSTALLATION

Terminals, opening covers or removing elements can expose parts that are hazardous to the touch while the device is powered. Do not use the device until it is fully installed.

The device should be installed inside an electric panel or enclosure, and panel-mounted.

To install it, take the following steps:

1.- Make a cut in the panel, according to the dimensions in **Figure 1**.

Figure 1: Cut in the panel.

2.- Remove the device's fixing clips (**Figure 2**).

Figure 2: Installation.

3.- Insert the device into the cut in the panel.

4.- Fit the fixing clips until the device is fixed to the panel.

The device should be connected to a power circuit protected by a fuse with a maximum nominal current of **0.25 A**.

### 3.3.- DEVICE TERMINALS

Figure 4: Voltage measurement DCB-72 Vac.

If the voltage being measured is higher than the rated input voltage, a voltage transformer should be connected to the device.

## 4.- OPERATION

### 4.1.- DISPLAY

The device features a 5-digit LED display, which is used to display the measured parameters and to configure these parameters

Figure 5: Display DCB-72.

### 4.2.- KEYBOARD FUNCTIONS

The **DCB-72 Vac** features 4 keys to display and configure the device, **Figure 5**.

Table 6: Keyboard functions.

Key	Keystroke
	Previous screen <b>In the configuration menu:</b> Scroll through the digits
	Next screen <b>In the configuration menu:</b> Increase the value of the digit
	<b>Long keystroke (&gt; 3s):</b> Enter in configuration menu
	<b>In the configuration menu:</b> Jump to the next level / Confirm an operation

#### 4.3.- RELAY OUTPUTS

**Note:** only available for models: M22212 and M222120030000

The device features two programmable relay outputs (terminals 28, 29, 31 and 32 in **Table 4**, terminals 28, 31 and 32, as shown in **Table 5**) that can be programmed as remote control signals or alarms in the setup menu ("5.2.- RELAY OUTPUT 1" and "5.3.- RELAY OUTPUT 2").

#### 4.4.- DISPLAY

The DCB-72 Vac features 2 or 3 display screens, **Table 6**.

Use the and keys to browse the screens.

Table 7: Display menu.

Display menu	
<b>Voltage</b>	
<b>Frequency</b>	
<b>Note:</b> only available for models with relay outputs.	
<b>Status of the relay outputs:</b>	
1, status of the relay output 1: flashes when the relay is activated	
2, status of the relay output 1: flashes when the relay is activated	

If the voltage value measured by the device is higher than a % of the nominal value, the device can make the digits on the display start flashing, in the form of a light alarm. See "5.4.3.- LIGHT ALARM"

## 5.- CONFIGURATION

Press and hold the  key for more than 3 seconds to enter the configuration menu of the device. The configuration of the device is organized in different menus, **Figure 6**.

**Figure 6:** Configuration menu of the DCB-72 Vac.

(2) Only available for models with relay outputs.

From any screen of the configuration menus, if no key is pressed for 4 minutes, the device leaves the configuration menu and returns to the display screen.

**Note:** In "ANNEX A.- CONFIGURATION MENU" you can see the complete configuration menu.

On the *rERd* screen, press the key to access the configuration menu in the **display mode**, i.e., the configuration parameters cannot be modified.

On the *rERd* screen, press the or keys to access the configuration menu in the **programming mode**, i.e., the configuration parameters can be modified.

Figure 7: Access the configuration menu in the programming mode.

Before accessing the configuration menu, it is necessary to enter the access password.

Figure 8: Access password.

Use the key to modify the value of the flashing digit

When the desired value is shown on the screen, press the key to skip the digit.

**Default password:** 0001

**Note :** The password can be modified, see "5.4.1.- PASSWORD OF ACCESS".

To validate the data, press the key.

If the password entered is incorrect, the *Err* message will appear for a few seconds and the device will return to the password configuration screen, **Figure 8**.

## 5.1.- CONFIGURATION OF THE INPUT

Figure 9, shows the main screen of the input configuration menu, from which the primary voltage and secondary voltage are configured.

Figure 9: Input configuration menu, main screen.

Press the key to open the configuration menu.

Figure 10:Input configuration menu.

### 5.1.1.- PRIMARY VOLTAGE

This screen is used to configure the value of the primary voltage.

Use the key to modify the value of the flashing digit

When the desired value is shown on the screen, press the key to skip the digit.

When you reach the last digit and press the key, you select the position of the decimal point. Use the to modify the decimal point.

**Minimum configuration value:** 0.

**Maximum configuration value:** 9999.

To validate the data, press the key.

Use the and keys to browse the configuration screens of the menu.

### 5.1.2.- UNITS OF THE PRIMARY VOLTAGE

This screen is used to configure the units of the primary voltage.

Use the key to browse the different options:

**OFF**, the unit of the primary voltage is **V**.

**on**, the unit of the primary voltage is **kV**.

To validate the data, press the key.

Use the and keys to browse the configuration screens of the menu.

### 5.1.3.- SECONDARY VOLTAGE

This screen is used to configure the value of the secondary voltage.

Use the and keys at the same time to configure the value.

Use the key to browse the different options:

**63.5**, for the voltage scale of 0 ... 63.5 V.

**100.0**, for the voltage scale of 0 ... 100 V.

**110.0**, for the voltage scale of 0 ... 110 V.

**230.0**, for the voltage scale of 0 ... 230 V.

**380.0**, for the voltage scale of 0 ... 380 V.

**480.0**, for the voltage scale of 0 ... 480 V.

To validate the data, press the key.

Use the and keys to browse the configuration screens of the menu.

### 5.1.4.- UNITS OF THE SECONDARY VOLTAGE

**Note:** This parameter cannot be modified.

Use the and keys to browse the configuration screens of the menu.

### 5.1.5.- SAVE CONFIGURATION

To save the configuration of the device, press the  key, until the main screen of the input configuration menu is opened, **Figure 9**.

Press the  key again to show the validation screen.

Use the ,key to browse the different options:

**no**, exit the configuration without saving the changed values.

**YES**, save the changed configuration values.

Press the  key to validate the data and exit the configuration menu.

## 5.2.- RELAY OUTPUT 1

**Note:** Only available for models with relay outputs.

Figure 11, shows the main screen of the configuration menu of relay output 1.

Figure 11: Configuration menu of relay output 1, main screen.

Press the key to open the setup menu.

Figure 12: Configuration menu of relay output 1

### 5.2.1.- RELAY MODE

This screen is used to configure the operating mode of relay 1.

Use the key to browse the different options:

**oFF**, relay output 1 is disabled.

**rEn**, remote control output. **Note:** This option is only available in devices with communication.

**ALr**, alarm output.

To validate the data, press the key.

Use the and keys to browse the configuration screens of the menu.

### 5.2.2.- RELAY PULSE DURATION

The alarm relay can behave in 2 different ways:

**1.-** The relay is activated when the alarm is triggered and is deactivated when the alarm is deactivated.

**2.-** The relay is activated when the alarm is triggered and is deactivated after a programmed period of time, even though the alarm condition has not been cancelled.

This screen is used to configure the programmed time, i.e., the relay pulse duration.

To make the relay operate in mode **no. 1**, program the value to 0.

Use the key to modify the value of the flashing digit

When the desired value is shown on the screen, press the key to skip the digit.

**Minimum configuration value:** 0 x 0.1 s

**Maximum configuration value:** 9999 x 0.1 s

**Example:** Use program 0050 to configure a value of 5 s.

To validate the data, press the key.

Use the and keys to browse the configuration screens of the menu.

### 5.2.3.- ALARM PARAMETER

This screen is used to configure the parameter that will be used to activate the alarm.

Use the key to browse the different options:

*F--H*, Active alarm when the frequency is higher than the alarm value.

*U--H*, Active alarm when the voltage is higher than the alarm value.

*F--L*, Active alarm when the frequency is less than the alarm value.

*U--L*, Active alarm when the voltage is less than the alarm value.

To validate the data, press the key.

Use the and keys to browse the configuration screens of the menu.

### 5.2.4.- CONNECTION DELAY

This screen is used to configure the alarm connection delay.

Use the key to modify the value of the flashing digit

When the desired value is shown on the screen, press the key to skip the digit.

**Minimum configuration value:** 0 x 0.1 s

**Maximum configuration value:** 9999 x 0.1 s

*Example:* Use program 0050 to configure a value of 5 s.

To validate the data, press the key.

Use the and keys to browse the configuration screens of the menu.

### 5.2.5.- ALARM VALUE

This screen configures the input value of the device from which the alarm will be activated. This value must be entered with reference to the value of the secondary voltage.

**Example:** In an installation where it has been programmed:

Primary voltage : 300.0 V

Units of the primary voltage : OFF (V)

Secondary voltage: 230.0 V

If you want to activate the alarm at a value of 250.0 V, the value to be programmed in this screen is:  
 $(230.0 \text{ V} \times 250.0 \text{ V}) / 300.0 \text{ V} = 192 \text{ V}$

Use the key to modify the value of the flashing digit

When the desired value is shown on the screen, press the key to skip the digit.

**Minimum configuration value:** 0000

**Maximum configuration value:** 9999

To validate the data, press the key.

Use the and keys to browse the configuration screens of the menu.

### 5.2.6.- HYSTERESIS

This screen is used to configure the hysteresis value, i.e., the difference between the alarm connection and disconnection value.

Use the key to modify the value of the flashing digit

When the desired value is shown on the screen, press the key to skip the digit.

**Minimum configuration value:** 0 V

**Maximum configuration value:** 9999 V

To validate the data, press the key.

Use the and keys to browse the configuration screens of the menu.

### 5.2.7.- SAVE CONFIGURATION

To save the configuration of the device, press the  key until the main screen of the relay output 1 configuration menu is opened, **Figure 11**.

Press the  key again to show the validation screen.

Use the  key to browse the different options:

**no**, exit the configuration without saving the changed values.

**YES**, save the changed configuration values.

Press the  key to validate the data and exit the configuration menu.

### 5.3.- RELAY OUTPUT 2

**Note:** Only available for models with relay outputs.

**Figure 13**, shows the main screen of the configuration menu of relay output 2.

Figure 13: Configuration menu of relay output 2, main screen.

The configuration is the same as for alarm relay 1, see "**5.2.- RELAY OUTPUT 1**".

#### 5.4.- CONFIGURATION OF THE DISPLAY

Figure 14, shows the main screen of the configuration menu of the display.

Figure 14: Configuration menu of the display, main screen.

Press the key to open the configuration menu.

Figure 15: Configuration menu of the display.

##### 5.4.1.- PASSWORD OFF ACCESS

This screen is used to configure the value of the password used to access the configuration menu in the **programming mode**.

Use the key to modify the value of the flashing digit

When the desired value is shown on the screen, press the key to skip the digit.

**Minimum configuration value:** 0

**Maximum configuration value:** 9999

To validate the data, press the  key.

Use the  and  keys to browse the configuration screens of the menu.

#### 5.4.2.- BRIGHTNESS OF THE DISPLAY

The brightness of the display is configured on this screen.

Use the  key to browse the different options: the display has 5 brightness levels, from L1 to L5.

To validate the data, press the  key.

Use the  and  keys to browse the configuration screens of the menu.

#### 5.4.3.- LIGHT ALARM

If the voltage value measured by the device is higher than a % of the nominal value, the device can make the digits on the display start flashing, in the form of a light alarm.

Use the  key to modify the value of the flashing digit.

When the desired value is shown on the screen, press the  key to skip the digit.

**Minimum configuration value:** 50.0%

**Maximum configuration value:** 120.0%

**Note:** If the a value of 0 is programmed, the light alarm will be deactivated.

To validate the data, press the  key.

Use the  and  keys to browse the configuration screens of the menu.

#### 5.4.4.- SAVE CONFIGURATION

To save the configuration of the device, press the  key until the main screen of the configuration menu of the display is opened, **Figure 14.**

Press the  key again to show the validation screen.

Use the , key to browse the different options:

**no**, exit the configuration without saving the changed values.

**YES**, save the changed configuration values.

Press the  key to validate the data and exit the configuration menu.

#### 5.5.- SOFTWARE VERSION

The software version of the device is shown in the **display mode**.
